

Quality – made in Germany

As a family-owned company, Winkhaus can look back on a tradition of more than 160 years. Now in the fifth generation, Winkhaus is still in family hands. Our customers around the world value the competent service, especially high product quality, and innovative solutions for door and window technology from Germany.

bluecompact.com

Simple system, easily explained.

blueCompact was developed to meet your special requirements for a user-friendly locking system. Of course, you are not left on your own to deal with the variety of functions. We have developed a tutorial concept which guides you step-by-step through the initial installation. Then you can also view a video explaining each function as many times as necessary.

This is all integrated in the app, so the instructions are always available.

System with a growth guarantee

The locking system will impress you with its technological capabilities and the user-friendly components. In particular, the cylinders are the same shape as conventional locking cylinders, so they can be easily installed without the need to call in a technician.

If you should choose to expand your workplace or build an addition to your home, you can also adapt your locking system to accommodate the new circumstances. blueCompact can be expanded to up to 99 keys and 25 cylinders.

An overview of blueCompact

Start a smarter life and discover the versatility of this unique locking system.

blueCompact offers you:

- + Convenience: manage your system easily using the app
- + Flexibility: lost keys can be blocked at the flick of a switch
- + More control: all locking events can be closely monitored
- + Remote access: locking authorisations can be issued remotely
- + Security: data is only stored on the key
- + Knowledge: every step is explained via video instruction
- + Practicality: easy installation and flexible expansion

WINKHAUS

Your smart home begins at your door
blueCompact

bluecompact.com

Simple. Flexible. Smart.

With blueCompact, your smart home begins at the front door. Electronic locking systems offer a number of advantages, allowing you to make configurations that are more individual, more flexible, and simpler – even at a later time. You are also given complete control and an overview of the entire locking system.

blueCompact is ideal for smart homes and small businesses alike. Discover all the benefits of electronic locking systems with the latest highlight from Winkhaus.

The smart system with the app

Easily manage your entire locking system with an app. blueCompact is the first system which makes it possible to execute all processes, authorisations and changes via your smart phone or tablet.

Maximum convenience and user-friendliness meet smart networking – all in one locking system that leaves nothing to be desired.

Enable, block, manage.

Lost keys are no longer a problem: thanks to management via app and master, misplaced keys can be blocked immediately. Then it quickly becomes clear: anyone looking to gain access to your premises will be left facing a locked door. It is also practically impossible for unauthorised persons to copy the key.

Of course you can also reactivate the key should you happen to find it again.

Everything at a glance

The app provides you with a clear overview and shows exactly which key has accessed which room and at which time. This gives you the possibility of checking how well office hours are kept.

This is optimal for time recording measures in businesses or even in private use, e.g. to check whether your daughter came home last night at the agreed time.

Control, no matter where you are.

The blueCompact locking system from Winkhaus has been perfected down to the last detail and even offers you a solution for issuing access authorisation remotely. For instance, you can leave a key with your neighbour for use in emergency situations. Of course, this is only possible if you have given permission remotely via app.

Then the neighbour receives temporary authorisation to open the doors which you have specified.

No data in the cloud

In times when resourceful people pursue criminal activities and take aim at the data cloud, alternative methods must be found for protecting information. blueCompact has the answer: the details of your locking system are stored on the key itself instead of in a cloud.

Even if you lose your smart phone, the finder cannot gain access to the building.
