## **e-primo** | Security and flexibility in one

Are you looking for high security combined with optimum flexibility? e-primo offers you all this in one solution. While the electronic e-primo cylinder protects your door, you can determine who can access and exit the building via flexible authorisation assignment. No PC, software or wiring is required.

### **The benefits of e-primo at a glance**

- › Easy to use
- › Flexible authorisation assignment
- › Individual design selection

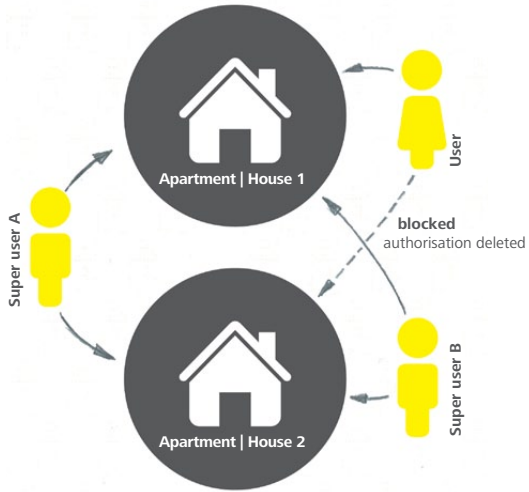

## e-primo | See how easy it is

Instead of a key, the e-primo cylinder works with user keys, such as key tags, cards, watches or wristbands. The user keys can be programmed directly on the e-primo cylinder. This enables authorisations and special functions to be assigned or deleted easily. Sounds like a lot of work? Just the opposite. Operating the e-primo cylinder is child's play.

**Special benefits for you:** no wiring is required for installation. e-primo fits exactly into the cylinder cut-out where a conventional lock cylinder can be installed. When purchasing, you only need to take into account the cylinder opening in the escutcheon and the length of the e-primo cylinder. Your EVVA partner will be happy to help you select the right product.

## e-primo | As varied as your needs

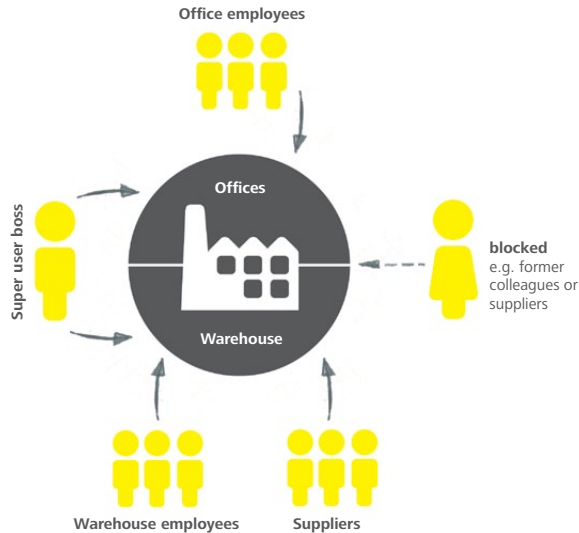

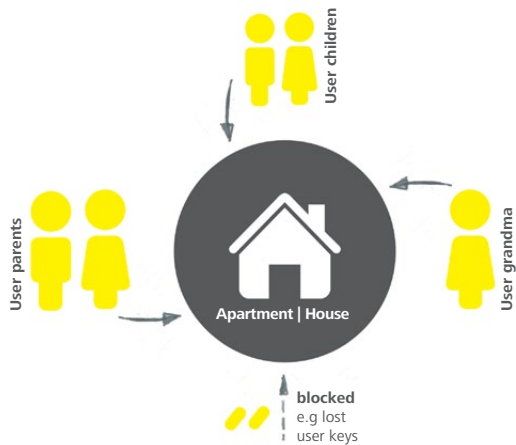

### Singles

Love comes and goes. So now you alone decide who can pay you a visit. This is the advantage of being single and of e-primo. User keys can be assigned quickly up to 249 times and can also be managed easily thanks to the function keys. Particularly useful: A user key can be assigned authorisation for a number of e-primos, thus enabling you to build your own e-primo network with your friends.

### Families

Are your little ones constantly losing their keys? Would you like the sweet granny to take it in turns with the neighbour to water the plants, while preventing the not-so-sweet granny from popping round for a visit unannounced? That's no problem with e-primo. As the owner, you can authorize and delete user keys even when they are not around.

## Business

Flexible working hours require flexible solutions. With e-primo, your employees are authorised to open specific doors as required or at specific times and suppliers are only granted access to specific areas of your building. ID cards of former colleagues, partners or suppliers can be deleted easily.

# e-primo | Simply everything in one

## Design

e-primo can adapt to different types of doors and environments. You select the elegant metal finish and the colour of the thumbturn.

## Authorisation assignment

As the owner (super user), you can allocate and revoke authorisations at any time. This means that you are always in control.

---

## Security

The e-primo cylinder offers drilling and plug pulling protection, providing protection against illegal opening methods. It's also not a problem if a user key gets lost. The user key can be deleted easily on the e-primo cylinder.

## Operation

Operation is extremely simple using acoustic and visual signals. Simply hold the user key to the thumbturn, wait for the positive response from the e-primo cylinder and turn.

## Equipment

You can purchase a starter package containing an e-primo cylinder and media kit. Master key systems can be equipped with further cylinders, user keys and function keys.

## Starter Package

- 1 e-primo cylinder
- 1 battery
- 1 cylinder fastening screw
- 1 installation tool
- 1 gasket
- 1 set of operating instructions
- 3 user keys
- 4 delete keys
- 1 programming key
- 1 copy key

The starter package contains an e-primo cylinder plus a media kit and can be used immediately. Your EVVA partner will be happy to advise you and can also offer additional e-primo cylinders, user keys and function keys, as well as useful tips for installation!
