

Figure: EPS cylinder

## Modular systems with Anti-snap

EVVA's anti-snap option will make any front door impenetrable. Even professionals are unable to open this hardened steel solution. Its function is simple, yet highly effective: The cylinder simply snaps at a rated break point in the event of a snapping attempt. The attack is registered and the remaining cylinder is blocked and rendered unusable. At this point, there is no way of breaking in without having to use a loud drilling machine. The anti-snap option from EVVA – for optimum protection of your front door. Available for thumb turn and double cylinders.

- Modular design (SYMO)
- Installed without having to replace the escutcheon or modify the door
- Anti-snap unit made of specially hardened steel

## 🛒 Ordering

Product code	DZ.AS. Cylinder length on the outside A from 41/cylinder length on the inside I from 31 KZ.AS. Cylinder length on the outside A from 41/cylinder length on the inside K from 31
Example	KZ.AS.41/K31
Available for all modular Systems (SYMO)	
Also available in combination with BSZ (external key override), SOS (priority function) and CF (classroom function)
